

Plate 1: Head Sample

- A** Low magnification view of the sample showing the high liberation and major phases
- B** Rare grain of chalcopyrite locked with bornite
- C** Coarse gold in fractured tetrahedrite. The grain contains two types of tetrahedrite
- D** Coarse gold in a composite grain of sphalerite and galena. Sphalerite contains fine inclusions of chalcopyrite.

A, B, C & D - Plane polarised reflected light
